

? 1. Team Building Rules

Team Composition

- Each player builds a team of **6 unique creatures**.
- For each creature:
 - Choose **4 moves** out of the **12** it can learn.
 - Choose **1 ability** out of the **2** it can have.
 - Distribute **30 stat points** across the 6 stats:
 - No more than **20 points** may be assigned to any single stat.
 - Points are integers.
 - Points add directly to the creature's base stats.

Pre-Battle Selection

- Both players see each other's full team of 6.
- Each player selects **4 creatures** to bring to battle.
- The **first 2 selected** start as active creatures.
- The remaining 2 start on the bench.
- Player has **1 minute** to choose; AI picks 4 randomly.

2. Battle Structure

Active & Bench

- Each player has **2 active creatures** and **2 bench creatures**.
- Bench creatures can be switched in during a turn.
- A switched-in creature **cannot act** on the turn it enters.

Switching Rules

- Switching counts as the creature's action for the turn.
- Both active creatures may switch on the same turn.
- Switching happens **before any moves resolve**.
- Damage for that turn is applied to the newly switched-in creatures.

Turn Flow

1. Player chooses actions for both active creatures (move or switch).
2. AI chooses actions for its active creatures.
3. All four creatures act in the same turn.

4. Move order is determined by:
 - **Move priority**
 - **Speed**
 - **Random tie-breaker** if speeds match
5. After all moves resolve, the next turn begins.

Knockouts

- A creature reaching **0 HP** faints.
- If a creature is KO'd **before its move**, its move is cancelled.
- When all **4 creatures** of a player faint, they lose.
- If both players lose simultaneously → **draw**.

? 3. Move Mechanics

Move Data

Each move has:

- Name
- Type (Mystic, Wind, Celestial, Mechanic, Neutral)
- Power
- Accuracy
- Category (Physical → uses Attack; Special → uses Special Attack)
- Priority (0–3)
- Targeting type
- Secondary effects

Accuracy

- A move with 75% accuracy has a 25% chance to fail.
- If a move fails, **no damage or secondary effects occur**.

Targeting Types

- **Single target** (player chooses one opponent slot)
- **Double target** (hits both opponents)
- **Self**
- **All three allies** = partner + both opponents (3 total)

Empty Slot Redirection

If a single-target move is aimed at an empty slot:

- It automatically redirects to the opponent's other active creature.

Double-Target Resolution

- Hit **left slot first**, then **right slot**.
- If left slot is KO'd by the first hit, the second hit still applies to the right slot.
- If only one opponent creature is alive, only that creature is hit.

? 4. Damage Calculation

Base Damage Formula

Damage depends on the move's category:

Physical Move

Damage = Move Power × Attacker's Attack / Defender's Defense

Special Move

Damage = Move Power × Attacker's Special Attack / Defender's Special Defense

- Damage is rounded to an integer.
- Subtract damage from defender's HP.

Type Effectiveness

Super-effective hits deal **+25% damage** (rounded).

Super Effective Chart:

- Mystic → Wind
- Wind → Celestial
- Celestial → Mystic
- Mechanic → Neutral
- Neutral → none

Effectiveness is based **only on the move's type**, not the creature's type.

? 5. Stat Changes & Secondary Effects

Secondary Effects Can:

- Increase own stats
- Decrease own stats
- Increase opponent's stats
- Decrease opponent's stats
- Self-damage

Stat Change Rules

- Stat changes **reset when switching out**.
- Stat changes persist until:
 - The creature switches out
 - The creature faints
- Stat changes may stack but are capped:
 - Maximum **+80%** total increase
 - Maximum **−80%** total decrease

? 6. Field Effects

Creation

- Moves or abilities may create field effects.

Behavior

- Field effects apply to **all active creatures** on the affected player's side.
- They persist for a fixed number of turns.
- They are **not tied to a specific creature**:
 - They remain even if the creator faints or switches out.
 - Any creature switched in is immediately affected.

Examples

- “Player's creatures' Speed increased by 50% for 5 turns”
- “Computer's creatures' Attack increased by 5% for 3 turns”

? 7. Abilities

Ability Types

Abilities fall into two categories:

1. Switch-in abilities

- Trigger when the creature enters an active slot
- Includes when the battle starts or when switching in

2. Passive abilities

- Always active while the creature is in an active slot
- Examples: immunity to certain move types, stat modifiers, accuracy modifiers

Ability Effects

Abilities may modify:

- Stats
- Accuracy
- Damage
- Field effects
- Other battle mechanics

? 8. Required Data Files

Creatures.csv

Contains:

- Name
- Type
- PNG asset
- Base stats
- List of 12 learnable moves
- List of 2 abilities

Moves.csv

Contains:

- Name
- Type
- Power
- Accuracy
- Secondary effects
- Targeting type
- Category (Physical / Special)
- Priority (0–3)

Abilities.csv

Contains:

- Name
- Description of effect

? 9. Visual Requirements

UI must show:

- Player's 2 active creatures
- Player's 2 bench creatures
- Current HP / Total HP
- Turn counter (max 30 turns)
- Field effects with remaining duration
- An **Info button** summarizing all rules in this document
